The image featured on the cover was generated from mouse fMRI data collected in the study by Antonoudiou *et al.* (in this issue, pages 283–293). The original plot illustrates the strength of fMRI connections between brain regions. The two hemispheres represent the effects of chronic stress and recovery of those connections after allopregnanolone treatment (left/pink and right/blue, respectively). The authors also found that these changes were associated with a shift of the basolateral amygdala network oscillations from low (~ 4 Hz) to high (~ 8 Hz) theta bands. Data for this image were acquired by Najah Walton. The original plots were generated using Python by Grant Weiss. The image was stylized by Phil Colmers, Pantelis Antonoudiou, Grant Weiss, and Jamie Maguire. fMRI, functional magnetic resonance imaging.
